KONE Design (Fin) Design: Valtteri design by Milla Loukari for Marimekko

### Lumi

Manufactured by Suunto, Lumi is the first sporting instrument specially designed for the active urban woman who also spends time in the outdoors. **Elizabeth Salonen** designed the streamlined wristop computer elegant and lighter than regular instruments marketed to athletes and heavy users. Suunto Lumi features an altimeter, barometer, compass and watch. It also forecasts weather, and warns of an upcoming storm or thunder when air pressure suddenly changes. You can also wear it round your neck or attach it to your rucksack, if you want an even suntan without wrist lines. ↑

### Taking the lift

Taking the lift is like a small journey: it starts and ends and there is something in between. Not everyone likes cramped space, and some people find the forced closeness of others oppressive. The Kone lift manufacturing corporation considered this and developed a new design concept seeking to influence all the senses of lift passengers and to make the use of a lift an experience. The technology is of Kone's customary excellent quality and high level of safety, and there are countless alternatives for the interior design of the lift cage ranging from Marimekko fabrics to steel or hardwood veneer. ←
